

MicroMain

Software for Hospitality and Recreation

Since 1991, hospitality and recreation sites—from hotels to amusement parks to museums to sports arenas—have been using MicroMain™ software to manage their maintenance and facility operations.

Improve Customer Service

Providing guests the very best accommodations and service is key for managers in hospitality and recreation. MicroMain software provides the tools for you to improve asset and facility maintenance, which then allows you to focus on the customer and first-rate guest care.

Increase Employee Productivity

Streamline your maintenance operations with MicroMain software. Easily track assets, automate work orders, cut labor time, and increase overall productivity. The software also addresses your specific needs, such as:

- Issuing reports to regulatory agencies
- Providing frequent inspections of key assets
- Tracking time and costs of all maintenance activity
- Determining total cost of ownership (TCO) for your equipment
- Rolling out the system to multiple sites across the country

MicroMain's record of success ensures that you will find the functionality, features, and support that you require.

Reduce Complaints

Whether your organization welcomes guests to a stadium, restaurant, hotel, or other venue, you need to be sure your guests find equipment in working order. Preventive maintenance helps you take care of assets on a regularly scheduled basis, which keeps the equipment working optimally. Elevators run, air conditioners work, doors lock—and most important, guests don't have complaints.

Manage Multiple Sites

MicroMain helps you to organize data so that you are able to manage multiple sites in the most productive way, such as:

- Recording supplier information
- Tracking parts, assets, and contracted services
- Creating purchase orders, including quantity and cost information
- Tracking the status of projects, such as the expansion of a hotel lobby or adding additional seats to a sky box

Work Efficiently

With MicroMain software, you can work more efficiently with Pocket PCs, phones, and other handheld devices for work orders, inspections and inventory control. Receive work requests via the web or intranet, as well. You can also:

- Use labor timesheets
- Track tools and keys
- Use data-enabled drawings for space planning
- Track assets and personnel visually
- Catalog deferred maintenance needs
- Assess facility conditions
- Develop capital plans
- Use wireless and barcode-enabled handhelds

MicroMain's flexible features and customizations give you simply everything to manage your hospitality and recreation sites—simply.
