

SOFTWARE FOR HEALTHCARE

Since 1991, healthcare sites, from hospitals to long-term care facilities to medical clinics, have been using MicroMain™ software to manage their maintenance and facility operations.

ASSESS RISKS ACCURATELY

MicroMain for Healthcare contains risk assessment for equipment classified as Life/Safety, Critical Utilities, General, and Medical with independent scoring for both facilities and clinical applications. Equipment that contains patient data is flagged to identify security issues related to HIPPA compliance so you can adjust your maintenance procedures accordingly.

INTEGRATE WITH CLINICAL ENGINEERING

Unlike other facilities, healthcare organizations must meet additional needs related to clinical engineering/biomedical operations. These include:

- Managing internal clinical assets and clinical assets owned by other departments
- Identifying risk assessment of equipment based on a different set of criteria than facilities
- Maintaining test data and readings that are retrievable
- Managing multiple service contracts and warranties on a piece of equipment
- Associating equipment and other assets with patient IDs to provide a patient usage audit trail

REPORT ON COMPLIANCE

Many specific reports and action plans—recorded and updated on a regular basis—are required for regulatory agencies, such as JCAHO. MicroMain for Healthcare provides the data you need to accurately report your compliance requirements. Also, if equipment falls under the Plan for Improvement (PFI), you can use the software to track when the equipment becomes compliant.

PUT PATIENTS FIRST

MicroMain for Healthcare allows you to meet your maintenance needs so you can focus on your patients. Use it to:

- Maintain buildings and physical assets for optimal patient care
- Schedule and track resources across multiple shifts
- Maintain rooms, lobbies, operating rooms and other areas
- Keep power plant and electrical systems operating correctly and redundant back-up systems always ready in case of emergency

WORK EFFICIENTLY

With MicroMain software, work more efficiently with Pocket PCs, cell phones, and other handheld devices for work orders, inspections and inventory control. Receive work requests via the web or intranet, as well. You can also:

- Use labor timesheets
- Track tools and keys
- Use data-enabled drawings for space planning
- Track assets and personnel visually
- Catalog deferred maintenance needs
- Assess facility conditions
- Develop capital plans
- Use wireless and barcode-enabled handhelds

MicroMain's flexible features and customizations give you simply everything to manage your healthcare sites—simply.
