

MICROMAIN REPORTS

With MicroMain™ Reports you can measure progress and see the results of your work in managing your facility, plant, or organization.

MicroMain's standard reports are organized in groups to make it easy for you to generate the reports you need. Some of the report groups include assets, buildings, completed and open work orders, inspections and meters, labor and more.

All reports can be filtered on data fields within the report. You can also report within a specified date range. This gives you the exact information you need to monitor the maintenance activities within your organization. Using MicroMain's filtering options, you can create a virtually unlimited number of reports allowing you to see the precise information you need.

EASILY REPORT MAINTENANCE COSTS

Users find MicroMain's cost-related reports very helpful. Standard reports generate budget comparisons for you to track resource and asset costs for your facilities. You can review budget comparisons by account, maintenance category, department, and shop. In addition to tracking costs by account or maintenance category, you can also track and allocate costs in contracts.

USE BATCHES TO SIMPLIFY REPORTING

With MicroMain's batch feature, you can combine the reports you commonly generate on a routine basis. The filters you choose for your batch reports are set and saved for future reports.

In addition to narrative reports, MicroMain offers graphs that show percentages and comparisons for:

- Completed Work Orders by Building, Property, Work Order Type, Labor Category (number/percentage)
- Cost Analysis by Account, Category
- Cost of Completed Work Orders
- Inspection Point Ratings by Asset
- Total completed Work Order Costs/Month by Property and Asset

PROVIDE THE RIGHT REPORTS

With MicroMain Reports, custom reports can be easily created and added to your report selection, as well.

Keep key personnel and management apprised of the work in maintenance with easy reporting in MicroMain. Reports can be viewed in print preview, emailed in standard attachments, or exported to an Excel spreadsheet.

BENEFITS

- Generate detailed reports
- Use filters to extract specific data
- Visually display data with graphs
- Add customized reports
- Choose from 400+ standard reports
- Summarize maintenance info for department reporting
- Distribute reports easily
- Export report data to Excel
