Asset Tracking with Bar Codes and Tablet PCs

Asset Tracking at Your Fingertips

xmATRAK

With xmATRAK, you'll see results right away, including:

- Accuracy in asset count, description and location.
- Improved efficiency with fast bar code scanning.
- Significant time savings with automatic asset data entry.
- Automatic generation of transaction log to record asset movement.
- Identification of missing or misplaced assets.
- Greater ability to add new assets "on the fly."
- Enhanced security with on-the-spot verification of sensitive data.

Accurately track assets, record meter readings, update equipment specifications, and assess asset conditions with xmATRAK™, asset-tracking software from MicroMain.

xmATRAK allows you to easily track assets throughout your building or enterprise using a bar code scanner and a Tablet PC. By capturing information electronically, you'll increase accuracy and save time in compiling valuable asset data.

With the Tablet PC and attached bar code scanner, you can easily accomplish a physical count of assets room by room, floor by floor, or building by building. Simply scan asset bar codes to enter data on the spot. You can then generate reports—total count, specific detailed counts, or any representation of the data you need.

xmATRAK allows you to quickly inventory new facilities or accomplish regular inventories at your sites. With asset data scanned and automatically entered into the Tablet PC, you can build or update your database immediately.

Accurately track asset moves, identify missing or misplaced assets, and document asset locations for insurance purposes.

All asset information is automatically entered into the MicroMain XM™ database, where it is used to track asset information for comprehensive reports.

Identify and Track All Your Assets Using Bar Code Scanners and Tablet PCs
